A38 TO A44 PROJECT UPDATE

The Final Design effort to reconstruct and widen the Northeastern Extension between milepost A38 (Clump Road) and A44 (Steinsburg Road) continues to move forward. The project team continues working to complete final design for the mainline section south of the Quakertown interchange and advance the early action bridge replacements. The team also has continued with geotechnical testing, stormwater management and drainage design, and preparation of environmental permit applications. The final design for the Quakertown Interchange improvements is currently on-hold but will resume in the near future.

2017 CONSTRUCTION PROJECTS – EARLY ACTION BRIDGE REPLACEMENTS

Final design has been completed for both the Trumbauersville Road and Steinsburg Road early action bridge replacement projects. Reading Site Contractors, a Division of The H&K Group, Inc., will reconstruct both bridges and work is slated to begin on both bridges on or after February 27, 2017. Advance warning signs announcing the closure of these bridges will be posted two weeks prior to the start of construction.

TRUMBAUERSVILLE ROAD EARLY ACTION BRIDGE REPLACEMENT

The Trumbauersville Road overhead bridge, located at milepost 40.88 in Milford Township, Bucks County will be closed to traffic during reconstruction and a detour implemented. Automobile traffic will be detoured over Allentown Road and Finland/Upper Ridge Road (see graphic below). Additionally, a separate and slightly longer detour will be implemented for large truck traffic.

STEINSBURG ROAD EARLY ACTION BRIDGE REPLACEMENT

The Steinsburg Road overhead bridge, located at milepost 44.40 in Milford Township, Bucks County will be closed to traffic during reconstruction and a detour implemented. Automobile and Truck traffic will be detoured over Allentown Road, John Fries Highway (S.R. 663) and Spinnerstown Road (see graphic below).
